Logitech AudioHub notebook speaker system and USB hub

"One-stop notebook solution"

by Amy-Mae Elliott published on 11 September 2007

Logitech has launched the AudioHub Notebook Speaker System with integrated USB hub that they claim delivers exceptional audio in a breakthrough design.

The AudioHub combines a 2.1 one-piece speaker system and three integrated Hi-Speed USB ports in a compact design that fits neatly behind most notebooks.

The AudioHub speaker system features an adjustable one-piece, three-chamber speaker system with an integrated subwoofer that apparently creates balanced audio with clear highs and solid lows.

To help people manage their peripherals, the AudioHub offers three built-in Hi-Speed USB ports and the whole thing simply disconnects via USB when people need to take their notebooks with them.

On the base of the AudioHub, a cable management system allows people to easily pass cables from their devices to a USB port while along the back of the AudioHub, a cable hook controls cable clutter.

Three and a half inches tall the AudioHub has a compact, low-profile design that won't hog desk space.

The Logitech AudioHub notebook speaker system is expected to be available in the US and Europe beginning in October, for around \$99.99.
