Evesham intros Cosmos series of gaming PCs

From £1999...

by Amy-Mae Elliott published on 26 September 2007

Not long after announcing the "Oxygen" gaming PCs, Evesham has launched the new Cosmos gaming PC series, an even higher-end option for those who can splash the cash when it comes to a cool gaming rig.

As well as the latest Intel Core 2 Duo processors, Evesham has chosen to include the 8800 Ultra and 8800 Ultra SLI NVIDIA GPUs in the Cosmos series and all machines deliver full DX10.

Chassis-wise, the striking Cooler Master Cosmos chassis was designed to optimize NVIDIA's SLI GPUs and so claims to ensure your system runs "like a dream".

Sound proof materials create a quiet environment and a sound barrier design reduces vibration, while the Cosmos chassis also features "innovative" colling techniques as well as upgradeability.

Although both are customisable, the following two models are offered off-the-shelf (so to speak) in the range:

The SLi ready Cosmos sports an Intel Core 2 Duo processor E6850 (3GHz, 4MB cache, 1333MHz), Microsoft Windows Vista Ultimate, single 768MB NVIDIA GeForce 8800 GTX Ultra, 2GB Corsair DDR 2 800MHz Memory (EPP), 500GB SATA 7200rpm HDD, 24-inch Widescreen TFT display with HDMI and 2 x Multi Format Dual Layer 20x DVD Writers.

The Cosmos Elite, described as the "very epitome of what you can currently get on the market", features Intel Core 2 Extreme processor QX6850 (3GHz, 8MB cache, 1333MHz), Microsoft Windows Vista Ultimate, Dual 768MB NVIDIA GeForce 8800 GTX Ultra, 4GB Corsair
