Nextlink INVISIO G5 and B3 Bluetooth headsets launch

World's smallest Bluetooth headset as used by the Special Forces

by Amy-Mae Elliott published on 5 December 2007

Nextlink has announced it is to launch its first INVISIO Bluetooth headsets, INVISIO G5 and INVISIO B3 for the consumer market.

As used by SWAT Teams and Special Forces across the globe "to meet needs in extreme conditions", as you can imagine we are a little bit excited about these coming to the UK market.

The INVISIO G5 is described as a very small and discreet wireless headset weighing less than 6 grams. It is 3.3cm long and 1.6cm wide, which makes it the lightest and smallest Bluetooth-enabled headset in the world.

The three button interface controls the functionality of the headset and it has a protective case not only protects the headset when stowed in a pocket or bag, but also charges the headset while on-the-go.

Without the on-the-go charging the headset provides up to 4 hours talk time and 150 hours of standby time but the case brings the talk time up to 20 hours and the standby time up to 30 days.

The INVISIO G5 is worn using the patented left- or right-eared "Soft Spring" that apparently adapts perfectly to the contours of the ear, also allowing easy use of eye wear with supreme comfort.

Nextlink also introduce an entry level headset, the INVISIO B3, a lightweight, Bluetooth headset that provides up to 6 hours talk time and up to 170 hours of stand-by.

The G5 is priced at £79.99, while the B3 is £29.99.
