## Advance Acoustic EZY-7 with iPod dock

### All-in-one entertainment

by Katie Scott published on 10 December 2007

Advance Acoustic has launched a new music centre with an iPod dock.

The EZY-7 includes two 50W musical amplifiers under 4 Ohms, and comes with four line-level inputs and a single set of speaker terminals.

Its AM/FM tuner offers RDS and 30 channels can be programmed in for quick selection.

While all of this sounds standard, it is the built-in iPod dock that will give this i-Generation appeal.

The iPod can be controlled, like all of the features of the EZY-7, using the included infrared remote control.

The device is 44x35x11 and weighs 9kg. It is priced around \$800, which is about £392.
