## CES 2008: Samsung's 31-inch OLED television

1,000,000:1 contrast ratio

by Amy-Mae Elliott published on 7 January 2008

As was announced before the event began, Samsung is showing a 31-inch OLED television at CES 2008.

Considerable larger than Sony's 11-inch offering that is actually available for sale, this big screen version is not planned to go into mass production until 2010.

With a 1,000,000:1 contrast ratio and a depth of less than 2cm, it's an impressive bit of kit.
