## Samsung prepping G810 for MWC 2008 launch?

### Spec and pics of N95 challenger emerges

by Amy-Mae Elliott published on 5 February 2008

Rumours are circulating in the blog world that Samsung is prepping an exciting new handset for launch at next week's Mobile World Congress (3GSM) event in Barcelona.

Described as a real Nokia N95 challenger the rumoured upcoming Samsung G810 handset, appears to be based on the G800 cameraphone, but with some extra specs thrown in for good measure.

The handset is said to boast GSM/UMTS/3.6Mbps HSDPA connectivity, a Symbian S60 OS, a 2.6-inch 262K Color QVGA TFT display, a 5-megapixel camera with 3x optical zoom, anti-shake, face recognition, macro mode and autofocus and 150MB of memory and microSD memory card slot.

In addition there's GPS navigation, Wi-Fi b/g, Bluetooth 2.0 EDR and USB 2.0 (microUSB connector) and a rumoured price tag of 580 euros which means this is aimed at the high-end market.

Pocket-lint will be attending MWC 2008 so stay tuned for all the news from the show.
