BenQ V2400W - the world's slimmest 24-inch monitor

"Unexpected asymmetry and aerodynamic curves of the B-2 stealth bomber"

by Amy-Mae Elliott published on 17 March 2008

BenQ has launched its V2400W "premium" LCD display in Taiwan with the claim that it's the world's slimmest 24-inch widescreen monitor.

And - according to the company - it will "create a new lifestyle trend in computer hardware design that targets the sophisticated, stylish consumer".

The iF Design Award winning offering combines "unexpected asymmetry and the aerodynamic curves of the B-2 stealth bomber" and is the first in a new "Kinergy" design range from BenQ.

The V2400W, only 2.44-inches at its thickest point, boasts specs that include a 4000:1 dynamic contrast ratio, full 1080p HD support, touch controls and an overall mirror-black finish.

The V2400W will be available at the end of March in China and Asia and available April in Europe and America.
