HANNSpree Starlight Blue television launches

Night sky themed telly for star gazers

by Amy-Mae Elliott published on 28 April 2008

Novelty goggle-box maker HANNSpree has launched another unusual televisual offering into its UK product range with the introduction of the "Starlight Blue".

The Starlight Blue features a starry night sky inspired 3D design. A touch of light on the 15-inch Starlight Blue LCD TV sets the diamond polycarbonate materials to sparkle, "like stars on a clear, starry night".

The Starlight Blue's contours mimic that of crescent moons, and the night sky theme continues with randomly lit crescent moon shapes and a futuristic, orbital theme stand.

Specs aren't quite as galactic as the funky design at 1024 x 768 XGA resolution, 500cdm2 brightness, 500:1 contrast ratio, 150 degrees viewing angle with 2 x 2 Watt speakers but no doubt young star-gazers will be more than happy to make the compromise.

The Starlight Blur is one of a number of HANNSpree televisions (including some from the Zoo range, and the TimeSquare model) currently on offer for £99 direct from HANNSpree, order line is 0871 666 0850.
