Fujitsu U2010 Lifebook - specs revealed

5.6-inch mini PC with a not so little price tag

by Katie Scott published on 29 July 2008

It's been spotted and snapped at various tradeshows around the world, but now Fujitsu has finally released the tech specs for its 5.6-inch Lifebook - the U2010.

Well - sort of released - the details have cropped up on a Vietnamese website called Tinhe te.

It says that the U2010 will come with the option of a 1.6 or 1.8GHz Atom processor, 1GB RAM and an 80GB hard drive.

The mini PC will run Vista Business, and HSDPA, GPS, Wi-Fi and Bluetooth have also all been squeezed in.

We also know that it doesn't have a touchscreen but it looks to have a fairly decent sized keyboard.

The screen (which has a resolution of 1024 x 768) swivels and folds flat, and the PC also, from the pics, appears to include a fingerprint scanner.

The site lists the price as a hefty \$1300 (£655).
