## Apple releases iPhone 2.0.1

### Bug fixing software update

by Amy-Mae Elliott published on 5 August 2008

Apple has released the first update to the iPhone 2.0 software for the iPhone and iPod touch, which promises bug fixes.

Reports suggest that installing the update will un-jailbreak phones but that things are "snappier" with the 2.0.1 software running.

It's available now via update in iTunes.
