## Audi O car concept

See what they did with the name eh?

by Katie Scott published on 15 August 2008

A design student from the Czech Republic was inspired by his iPod to come up with the Audi O - a car for Audi O philes.

Ondrej Jirec has packed in an astonishing audio system into this motor with internet connectivity for downloading music onto the built-in 650GB hard drive, and a Bluetooth system for connecting two or more Audi O cars together.

And it comes completely decked out with a couple of DJ decks and mixer so you can make your own sweet music.
