VIDEO OF THE DAY - Star Wars Holocron

This guy has the dream job

by Ian Hughes published on 28 August 2008

A long, long time ago, in a galaxy far, far away (America) a young writer by the name of George Lucas threw a pebble into the science fiction pond. The ripples became a tidal wave as Star Wars took over the collective consciousness of generations to follow. So much so that people had to start tracking the ever-expanding universe he'd created to make sure there weren't any continuity errors.

Uber-geeky this one, but the effort gone in to it is admirable.
