## Commodore UMMD 8010/F netbook announced

IFA 2008: More than just a C64

by Stuart Miles published on 1 September 2008

Commodore has joined the netbook market with the announcement of a new Via C7-M processor -sporting netbook at IFA in Berlin for those keen to rekindle the C64 days.

The rather bland looking netbook, called the UMMD 8010/F will offer an 80GB hard drive, 1GB of RAM and the usual array of wireless connectivity in the form of 802.11b/g and Bluetooth, although the latter will be optional.

Opting to run the Via C7-M processor instead of Intel's Atom 1.6GHz offering taken up by many other manufacturers, the netbook will come with the choice of Microsoft XP or GNU Linux operating systems.

Coming with a 10-inch screen there is a 1.3 megapixel webcam and a digital array microphone to complete the disappointing stats.

Available in four colours; white, black, grey and sweet pink prices for the laptop start, considering its offering, at a staggering £325.

The UMMD 8010/F will be available later in the month a spokesperson told Packet-lint.
