RoadSync Version 4.0 launched by DataViz

Support for HTML E-mail, Tasks and Contact Photos

by Katie Scott published on 30 October 2008

DataViz has rehailed its Microsoft Exchange ActiveSync client, RoadSync 4.0.

This tool now includes support for HTML email, Tasks and Contact Photos.

The software brings Exchange ActiveSync connectivity to all Samsung, LG and Nokia phones based on the S60 and Symbian OS.

So you get HTML formatted emails displayed on all S60 3rd Edition Feature Pack 1 and Feature Pack 2 mobile devices based on Symbian OS.

New features include tasks and contact photo synchronisation, pop-up notifications for new emails and keypad shortcuts for the most common messaging functions.

RoadSync 4.0 also adds better support for mailbox subfolders, font zooming, installation set-up and internet access point handling.

Pricing starts at \$49.99 per user.
