JVC goes potty with Sound Garden "Kirikabu" speaker

Growing noise

by Katie Scott published on 31 October 2008

JVC has gone all sco-friendly with its latest speaker concept - the Sound Garden "Kirikabu" speaker.

This combines a plant pot with multi-directional speakers consisting of a woofer, and left- and right-channel stereo speakers powered by an internal amplifier.

The manufacturer showed off the concept in Tokyo at the Designer's Week exhibition but did the speakers drive the crowds potty?
