## VIDEO: Packard Bell's iPower GX laptop

Quick hands on with this gaming behemoth

by Katie Scott published on 21 November 2008

The iPower GX is aimed at gaming enthusiasts but is also claimed to be powerful enough for movie viewing (although this model doesn't have a Blu-ray drive) and also for memory hungry graphics applications.

Spec-wise, it has Nvidia GeForce 9800M GTS with 1GB of GDDR3 VRAM, and it is powered by the Intel Core 2 Quad processor Q9100.

The screen is a 17-inch full HD display with 1920 x 1200 resolution along with "glossy black and brushed aluminium surfaces".

It will be available from January with prices starting at £999.

Hit the arrow button above to see it at the UK launch.
