TrekStor MovieStation pocket c.uc launches

New multimedia storage drive with SD card slot

by Amy-Mae Elliott published on 1 December 2008

TrekStor has launched its second external multimedia hard disk, the strangely named MovieStation pocket c.uc. The c.uc lets users play the digital videos, photos and music stored on the device directly to a TV or hi-fi system via an on-screen menu.

New to the c.uc is a memory card slot compatible with SD, MMC and xD cards of up to a slightly stingy 2GB storage capacity. The TrekStor MovieStation pocket c.uc can play videos in MPEG-1, MPEG-2 and MPEG-4 format including DivX and Xvid files and music and audio books in MP3, WMA and WAV files. It also supports JPEG format.

Complete with Nero BackItUp 2 Essentials software for auto back-ups, soft-touch casing, remote control, power supply, AV and YUV adapter cables, a SCART adapter, software CD and a multilingual user guide, prices range from £99.99 for the 250GB models to £139.99 for the 500 Gigger.
