## Mac mini Radio and Speaker System unveiled

With access to 10,000 stations

by Verity Burns published on 23 March 2009

This lovely looking concept from Sebastien Sauvage is a stackable Radio and Speaker System for the Mac mini.

Specs include internet radio, with access to around 10,000 stations worldwide, five USB ports for attaching other devices and a multi card reader.

With a design that speaks for itself, the designer has also promised a sound to match. Here's hoping this is one concept that makes it to our shelves.
