Mobile Fun launches mobile broadband signal boosters

Clip antennas to help where there's weak 3G

by Amy-Mae Elliott published on 19 June 2009

Mobile Fun has launched a range of signal boosters that it claims will help to solve the problem of weak 3G mobile broadband reception.

The company has a range of "clip antennas" for mobile broadband dongles that are said to give them an extra boost to get an improved 3G broadband signal reception.

To get the "best signal uplift", you need the right antenna. Mobile Fun has an online guide to its range that covers dongles by network, as well as by model.

As an example, an antenna for use with a Huawei E160 USB modem is currently on offer for £24.47.
