## Motorola Motus emerges

New Android handset with reverse flip keyboard to launch as the "Backflip"?

by Amy-Mae Elliott published on 20 November 2009

A new Motorola handset has emerged from the mists of the Internet as an as-yet-unconfirmed coming-soon Android device. The Motorola "Motus", said to be due an official announcement in early 2010, has been spotted in this oh-so-blurry spy shot sent into an Android fan site. Looking a little like the new DEXT, or CLIQ depending on which side of the pond you're on, the Motus is said to offer a 3.1-inch HVGA screen, a 5-megapixel camera with flash, Wi-Fi, Bluetooth and GPS and run Android 1.5 with the Motoblur interface. Design-wise the handset gets a reverse flip keyboard and a rear directional touchpad adding serious weight to CellPassion's speculation it could launch as the "Backflip" a name recently registered in the EU by Motorola.
