## Samsung previews new slider smartphone, the SGH i520

### Not an official unveiling

by Amber Maitland published on 18 October 2006

At the Symbian Smartphone Show, Samsung has debuted its latest S60 mobile, but without officially announcing it.

The SGH i520 is a slim slider with a raft of high-spec features for the business user on-the-go. It features both HSDPA/UTMS, and EDGE/GPRS, but no Wi-Fi connectivity, according to the specs we've seen.

It also incorporates a 2MP camera and VGA resolution for video, a 2.3-inch QVGA, 262,000 pixel screen, and includes Bluetooth 2.0 and A2DP.

Other features include USB2.0 and PictBridge support, full HTML Browser by Symbian, 45MG of internal memory, and MP3 and audio playback.

Pocket-lint will keep you updated with the latest details as they become available.
