## CES 2007: Alienware bust out m9750 laptop with dual graphics cards

Dual graphics, dual processors, dual hard drives

by Amber Maitland published on 11 January 2007

Alienware included two graphics cards in its latest gaming notebook, the Area-51 m9750 notebook.

The company claims it's the first 17-inch notebook to combine the power of two graphics cards with Intel Core 2 Duo processors.

Graphics are provided by 512MB Nvidia Go 7950 GTX cards; the notebook also features a dual hard drives that total 400GB of storage space.

Alienware has also been kind enough to include a Blu-ray drive so that movies can be viewed in all their high definition glory on the large display.

Other features include up to 2GB of RAM, a TV tuner, and a full-sized numeric keypad.

The laptop is only just making a preview appearance at CES, but will be launching in Europe in the next few months.
