New Panasonic SDR-S10 claims to be world's smallest SD Camcorder

Small digital camcorder

by Stuart Miles published on 14 February 2007

Panasonic has launched what it is claiming is the World's Smallest SD Camcorder - SDR-S10.

The new model measures 1.2 x 2.5 x 4.5 inches in size and features no moving mechanism in the recording section and because of this offers a Quick Start function that allows the SDR-S10 to begin recording just 1.7 seconds after the power is switched on.

Other features include a 2.7-inch widescreen LCD and a Panasonic 10x optical zoom lens.

Those more clumsy than most will also like the shock and sufficient impact resistance measures introduced by Panasonic that means the SDR-S10 can be dropped from up to 1.2 metres. The camcorder also boasts a water-resistance design that takes advantage of the water resistance of SD/SDHC Memory Cards meaning you can use it near a pool without fear of damage.

Panasonic are also boasting a grip is designed so that you can stabilise the SDR-S10 by bracing your elbow against the body or as an alternative, the Sub REC button on the camera front makes it possible to shoot with a pistol-grip style all comfortably in the palm of your hand.

The Panasonic SDR-S10 is available from May 2007. No details as yet on price.
