Sony goes ultra-power for home projector

Sony's ultra-HD Cinema-in-a-box projector is feature packed

by Ryan Haynes published on 25 April 2007

It certainly isn't small, but you shouldn't expect it to be if you're looking for every feature in the solar system for your ultra-cinematic experience projector.

The new Sony CineAlta 4K SRX-R220 can display 8,850,000 pixels of ultra high definition footage. This technological monster is the latest of Sony's SXR (Silicon X-tal Reflective Display) line. Like the SRX-R1xx series it is yet to reach 10 megapixels, but it when it comes packed with many other features, there's less to worry about: LMT-100 media processor, LMS-100 screen management system, a gazillion gigabytes of RAID storage and uninterruptible power supply are all built-in.

The projector itself for any enthusiasts has 4096 x 2160 pixels resolution with a 2000:1 contrast and 14 foot Lambert brightness. The SRX-R220 model can fully cover a 20-metre screen (65.6 feet) with its 4.2W xenon lamp while the R110 goes up to 17 metres with a 3.0W and 14 meters with a 2.0W lamp.

Beyond connecting all kinds of video gear using BNC connectors you can also connect a computer, PlayStation 3 or AppleTV using a DVI port.

The SRX-R220 and SRX-R210 has prices starting at over \$125,000, UK prices and availability to come.
