## Novelty USB Cannon

Saves you running away to join the circus...

by Amy-Mae Elliott published on 24 May 2007

USB Missile Launchers are sooo over already. What you want is a USB Cannon.

Software is included so you can control the direction of attack via your mouse or keyboard, it can rotate 360 degrees round and 45 degrees up and down and - la piece de resistance (for us anyway) - it makes launching sound effects when fired.

Much more rakish than a plain ole missile contraption, show your fun circus-clown side in the office by firing foam Cannon "babes" at your work-mates ... you just know that's not going to get old..

\$35, via the site below.
